### 2.4 Hooke's law

## Task

## Can forces deform solid bodies?

In this experiment the deformation which is caused by the weight of "mass pieces" on two helical springs is measured. The deformation is a characteristic feature of each spring, nevertheless one can observe that a fundamental law is ruling here. It is the goal of this experiment to verify this law - Hooke's Law.

Use the space below for your own notes.

## Material

Material from "TESS advanced Physics Set Mechanics 1, ME-1" (Order No. 15271-88)

| Position No. | Material | Order No. | Quantity |
| :---: | :--- | :--- | :---: |
| 1 | Support base, variable | $02001-00$ | 1 |
| 2 | Support rod, split in 2 rods, $I=600 \mathrm{~mm}$ | $02035-00$ | 1 |
| 3 | Bosshead | $02043-00$ | 1 |
| 4 | Weight holder for slotted weights, 10 g | $02204-00$ | 1 |
| 5 | Slotted weight, black coloured, 10 g | $02205-01$ | 4 |
| 5 | Slotted weight, black coloured, 50 g | $02206-01$ | 3 |
| 6 | Helical spring $3 \mathrm{~N} / \mathrm{m}$ | $02220-00$ | 1 |
| 7 | Helical spring, $20 \mathrm{~N} / \mathrm{m}$ | $02222-00$ | 1 |
| 8 | Holding pin | $03949-00$ | 1 |
| 9 | Glass tube holder with tape measure clamp | $05961-00$ | 1 |
| 10 | Measuring tape, $I=2 \mathrm{~m}$ | $09936-00$ | 1 |

## Material required for the experiment

## Setup

First screw the split support rods together (Fig. 1). Set up a stand with the support base and the support rod as you can see in Fig. 2 and Fig. 3.

Fig. 1

Fig. 3

Clamp the extended measuring tape in the glass tube holder (Fig. 4) and clamp both on the base of the support rod (Fig. 5).

Fig. 4

Fig. 5

Fix the holding pin in the bosshead (Fig. 6) and hang the helical spring 1 in it (Fig. 7).

Adjust the length of the measuring tape so that its zero mark is exactly at the same level as the lower end of the helical spring. See Fig. 8 and Fig. 9.

Fig. 9

## Action

- Hang the weight holder $(m=10 \mathrm{~g})$ on the hooked end of the spring and record the extension $\Delta l$ (Fig. 10).
- Increase the mass by 10 g increments to a total of 50 g and read the corresponding changes in length $\Delta l$.
- Record all the values for the mass $m$ and the extension / in Table 1 on the Results page.
- Calculate the weight (force) $F_{\mathrm{g}}=m \times 0.00981 \mathrm{~N} / \mathrm{g}$. You can see the values in as a graph.

Fig. 10
For fixing the slotted weight to the weight holder, you should slip the slotted weight over the top end of the weight holder (Fig. 11).

Fig. 11

- Exchange the helical spring 1 for the helical spring 2 . Move the measuring tape up or down until its zero mark is even with the lower end of the spring.
- Hang the weight holder with a 10 g mass piece (sum = 20 g ) on the spring's hook and note the extension $\Delta /$. Determine the corresponding extensions in length.
- Increase the mass in 20 g increments up to a total of 200 g and determine the corresponding extensions in length.
- Record theses values in Table 1 on the Results page and calculate the weight (force), too.

In order to disassemble the support base you should press the yellow button (Fig. 12).

## Results

Table 1

| Mass <br> $m$ in g | Weight (force) <br> $F_{\mathrm{g}} \mathrm{in} \mathrm{N}$ | Deflection of Spring 1 <br> $\Delta l \mathrm{in} \mathrm{cm}$ | Deflection of Spring 2 <br> $\Delta / \mathrm{in} \mathrm{cm}$ |
| :---: | :---: | :---: | :---: |
| 10 |  |  |  |
| 20 |  |  |  |
| 30 |  |  |  |
| 40 |  |  |  |
| 50 |  |  |  |
| 60 |  |  |  |
| 80 |  |  |  |
| 100 |  |  |  |
| 120 |  |  |  |
| 140 |  |  |  |
| 160 |  |  |  |
| 180 |  |  |  |
| 200 |  |  |  |

## Evaluation

## Question 1:

What interrelationship can be seen in the plotted values (graphs)? What is the difference between the two helical springs?
$\square$

## Question 2:

Which object is deformed by the slotted weights (mass pieces)?
$\square$

## Question 3:

Do the values for the two springs lie in one straight line?
$\square$

## Question 4:

Is the extension $\Delta /$ of the two springs proportional to the weight (force) $F_{g}$ and thus to the mass $m$ ?

## Question 5:

Determine the proportionality factor ( $k$ ) from the two curves:

1. $k_{1}=\Delta l_{1} / F_{\mathrm{g}_{1}} ; k_{1}=$ $\square$$\mathrm{m} / \mathrm{N}$
2. $k_{2}=\Delta I_{2} / F_{\mathrm{g}^{2}} ; k_{2}=\square \mathrm{m} / \mathrm{N}$

## Additional Tasks

The two helical springs differ in their proportionality factors $k$. Their reciprocal $1 / k$ is called the spring constant $D$ or deforming force:
$D=1 / k=F / \Delta l$
The spring constant is characteristic for a given spring.

## Question 1:

Calculate the spring constant. Which of the two springs has the larger spring constant?
$\square$

## Question 2:

What is the effect of this larger spring constant?
$\square$

## Question 3:

Do your measurements agree with the declared spring constants in the material list?
$\square$

## Question 4:

Are the deviations larger than $\pm 10 \%$ ?
$\square$
